ABSTRACT

The Office of Migrant Services' (OMS) summary presents demographic data on the 2,500 migrant families in 25 housing centers in 14 California counties in 1980. The typical migrant family in an OMS center is shown to be a Mexican family of 4, with 2 parents between the ages of 18 and 44, who have completed 2 to 6 years of school, and have 2 to 3 children and possibly a grandparent or other relative living with the family. For five months, three members of the household work in the field, and two of the children attend day or infant care within the center or summer school, then they return to Mexico to enter their children in school. Tables, accompanied by a brief narrative, cover: migrant center occupancy, family size, age of family members, school years completed by persons over 18, ethnic category of head of household, length of stay, and family home base. Migrant tracking, a new category, provides estimated data on "last work stop by state" and "next work stop by state" (other than home base or vicinity of state migrant center). A list of migrant center addresses, operational dates of OMS centers, and a map showing the location of each center are included. (AH)

INTRODUCTION

California, the largest user of seasonal labor in the United States, annually employs tens of thousands of out-of-state farmworkers. To ease the problems of housing this large in-migration of farmworkers and their families, the State Department of Housing and Community Development, Office of Migrant Services (OMS) contracts with local government agencies to provide decent and affordable housing for over 12,000 migrants in 25 housing centers in 14 agricultural counties. These centers are occupied during the six month harvest season which starts in April and continues through November.

This report is OMS' twelfth annual summary of demographic data on migrant families who occupy housing units provided by the State of California. However, because of new program policies and greater OMS experience with migrant centers, some changes in format of this year's report have been made to include more comprehensive information.

The tables contained in this report categorize family characteristics by migrant housing centers. This information is based on data obtained from the center manager-approved applications for housing completed by migrant families, and from the Monthly Occupancy and Rental Summaries, kept by the migrant housing center managers. A narrative section highlights each table.

MIGRANT FAMILY CHARACTERISTICS

The picture that emerges from the following tables of a typical migrant family in a state migrant center, in 1980, is a Mexican family of five, with two parents between the ages of 18 and 44 who have completed four to six years of school. The family has two or three children, and possibly a grandparent or another relative living with them. Three members of the household work in the field, and two of the children attend day or infant care within the center or summer school.

The families migrate from Mexico for the harvest season, work five months, and return directly to their home bases in Mexico to enter their children in school in the fall. The migrant cycle begins again in the spring.

The Jose Ochoa family has been returning to the Mathews III Center (San Joaquin County) for seven years

Table I

Migrant Housing Centers Occupancy Summary

Approximately 2500 families were housed in 2000 units during the 1980 harvest season. Many families remain at the centers for only several months. The average family size was 4.9 persons. Of the total units rented, 92% (1841) are two bedroom, 3% (60) are three bedroom and 4% (82) are four bedroom units.

The 2500 families housed include 12,406 individuals - 6371 (51%) adults and 5981 (49%) minors. There were 6406 registered agricultural workers (52% of the total migrant population housed). Eight percent of the migrant agricultural workers were under age 18. However, this figure underestimates the number of minors in the fields because they register as students if they attend school part-time.

Table II

Family Size by Center

Twenty-five percent of the migrant families had two or three members; 52% had four, five or six members; and 23% had seven persons or more. The smallest center (Patterson, Stanislaus County, 44 units), housed 46 families, and the largest (Shafter, Kern County 100 units) housed 137 families during harvest season.

Note: Family sizes of 14, 15 and 16 have been deleted because of the limited number of families in this category.

Table III

Age of Family Members by Center

Slightly over one half of the tenants housed in state migrant centers were 18 years of age and over (51%), while 49% were minors. Persons 18-44 years represented the largest age group (41%). Twenty-one percent were from 7 to 15 years, 10% were 45-64 years, 6% were 16-17 years and 1% was 65 years of age and over.

The substantial number of persons under 18 and over 65 years (50%) in the state migrant centers is not typical in private sector migrant housing camps which cater largely to single men. State migrant centers were developed to meet the demand for migrant family housing.

Note: Several changes have been made in age categories so as to correspond to school levels such as migrant center infant and day care. An Unknown category was also added.

Table IV

School Years Completed by Persons 18 and Over by Center

Most of the families housed in the 25 centers have migrated from Mexico, where the completion of six years of school is mandatory. However, 1% of the migrants reported having no formal education and 20% completed one to three years of school. Forty-four percent completed four to six years, 5% completed 12 years and 1% finished one or more years of college.

Table V

Ethnic Category of Head of Household by Center

The majority of head of migrant households (83%) were registered as Mexicans (although only 37% of the tenants have a permanent residence, i.e. "home base" in Mexico -- see Table VII), while 14% were Mexican-Americans and 3% were Anglo.

The center at Newell (Modoc County) accommodated 75% (48) of the Anglo migrant worker population housed by HCD. Many centers such as Harney Lane (San Joaquin County) had up to 86% of their units occupied by Mexicans. The Hollister center (San Benito County) consisted of 36% Mexican-Americans.

Table VI

Family Length of Stay by Center

State migrant centers are open for approximately six months per year (181 days). Migrants' "length of stay" is determined by the variety of crops and length of agricultural seasons in different regions. The average (mean) length of stay in migrant centers was approximately four months, while the most frequent length of stay (mode) was approximately five months.

The Newell center had the shortest mean length of stay of 55 days per family (1.8 months), while Mathews II (San Joaquin County) had the longest, with a mean of 161 days (5.4 months).

Center Code and Location	Total Families	Length of Stay									Mean--Average Length of Stay in Days	Mode--Most Frequent Length of Stay in Days

Table VII

Family Home Base by Center

A family's homebase is the community and state in which it permanently resides. Over one-third of the migrant families (37%) lived in Mexico during the off season (November to April), while one-quarter of the migrants had a permanent home base in California and another quarter resided in Texas.

Several migrant centers attract agricultural workers from only one or two regions, e.g. 85% (109) of the Arvin center (Kern County) residents were from Texas, 41% (43) of Los Banos (Merced County) migrant families came from Arizona, 66% of Hollister's families had a home base in California, and 68% of the Dixon (Solano County) families had a home base in Mexico.

A group migration may occur from one region to a particular center because of similarities of crops (specialization) between the two locations, or the desire to remain with one's friends and extended family.

Center Code and Location	Home Base									
	Arizona	California	Oregon	Texas	Washington	Other USA	Mexico	Unknown	Other*	Total Families

Migrant Tracking

Migrant tracking is a new category of information for the OMS Demographic Data Report. Tables VIII and IX indicate migrant patterns other than the prevalant and direct pattern from "home base" to the vicinity* of the state migrant housing center, and back again to "home base."

These tables are only estimates of migrant patterns, because of the general nature of the data (by state only), and several omissions by individual centers.

Tenant council meeting in the Parlier Center (Fresno County)

* For this report, "vicinity" equals an approximate radius of 20 miles from the state migrant housing center.

Table VIII

Last Work Stop by State
(other than home base or vicinity of state migrant center)

Of the total families housed in the state's migrant centers (2492), 29% (711) worked in a community other than "home base" before being housed in the center. Of these 711 families, 557 families worked in California, 25 worked in Arizona, 39 worked in Texas, 22 worked in Washington and 47 families worked outside of the U.S.A. between the time of leaving "home base" and being housed at the migrant center.

Last Work Stop / Home Base	Arizona	California	Oregon	Texas	Washington	Other USA	Other	Total
Arizona	17	24	—	—	2	1	1	45
California	—	176	3	2	2	11	1	195
Oregon	—	3	—	—	1	1	—	5
Texas	—	116	1	32	10	21	4	184
Washington	—	2	—	—	—	—	—	2
Other USA	—	—	—	—	—	—	1	1
Mexico	8	233	9	5	7	13	1	276
Other	—	3	—	—	—	—	—	3
TOTAL	25	557	13	39	22	47	8	711

Note: When the "last work stop" is in the same state as "home base," this indicates that the migrant family stopped and worked in a community other than "home base," in the same state, before arriving at the state migrant center.

Table IX

Next Work Stop by State
(other than home base or vicinity of state migrant center)

Of the total families housed in the state's migrant centers, 20% (499) traveled to another community ("next work stop") to work after being housed in the migrant center, before returning to "home base". Of these 499 families, 363 families worked in California, 29 families went on to Oregon, 25 went to Washington, 23 went to Texas, 33 left the U.S. and 15 went on to Arizona to work before returning to "home base.".

Of those 499 families, 140 has a "home base" in California, 77 in Texas, 22 in Mexico and 36 in Arizona.

Next Work Stop / Home Base	Arizona	California	Oregon	Texas	Washington	Other USA	Other	Total
Arizona	4	24	2	1	2	2	1	36
California	—	100	11	1	8	13	7	140
Oregon	—	6	—	—	1	1	—	8
Texas	—	63	2	4	4	2	2	77
Washington	3	2	—	—	—	—	—	5
Other USA	—	—	—	—	—	—	—	—
Mexico	8	164	13	17	9	15	1	227
Other	—	4	1	—	1	—	—	6
TOTAL	15	363	29	23	25	33	11	499

Note: When the "next work stop" is in the same state as "home base," this indicates that the migrant family stopped and worked in a community other than "home base" in the same state after departing from the state migrant center.
